Harborlight Digital - Service Offering Brief

Illustrative supplier profile for proposal-response testing I Version 1.0

ABOUT THIS SAMPLE

Fictional test data

Harborlight Digital, its products, staff, delivery history, and all claims in this document are invented solely for software testing. They are not real credentials, certifications, references, or performance guarantees.

Harborlight Digital is a fictional mid-sized technology consultancy focused on public-sector supplier services and workflow modernization. Its sample offer is a configurable supplier onboarding portal integrated with collaboration and finance systems. This brief is intentionally bounded: unsupported certifications, named customer references, and guaranteed outcomes are not claimed.

PROPOSED SERVICE

The proposed service provides an authenticated supplier portal, configurable application forms, document collection, validation, staff review queues, approval routing, expiry reminders, and an audit history. Supplier-facing and staff-facing screens share a common record model while applying different access permissions.

CAP-01 **PORTAL AND WORKFLOW**

Suppliers can save and resume applications, upload evidence, and respond to clarification requests. Internal reviewers can request corrections, assign a review, and record an approval decision with a reason.

CAP-02 **INTEGRATION APPROACH**

A standard integration layer can exchange approved supplier records with a finance platform using an API or scheduled encrypted file transfer. The exact connector, field mapping, and service account model are confirmed after technical discovery.

CAP-03 **DOCUMENT HANDLING**

Supplier documents can be stored in a customer-managed collaboration repository. The Authority owns the retention schedule and decides which documents are retained or placed on legal hold.

PROPOSED DELIVERY SHAPE

- Discovery: confirm process variants, identity/access model, data mappings, and security constraints.
- Configuration: establish portal forms, review queues, approval rules, reminders, and reporting.
- Integration and migration: implement the agreed finance exchange and migrate the agreed active-supplier dataset.
- Assurance and launch: complete functional testing, accessibility review, user acceptance, training, and controlled cutover.

Harborlight Digital - Service Offering Brief

SECURITY, OPERATIONS, AND SERVICE MODEL

For this illustrative offer, Harborlight proposes deploying the application into a customer-controlled cloud subscription in a UK region, subject to architecture review and service availability. Production data access is restricted to approved operational roles. Encryption, multifactor authentication, audit logging, backup frequency, recovery objectives, and support access controls are to be confirmed in the design and contract.

OPS-01 **SUPPORT PROPOSAL**

A service desk would accept incidents through a customer-agreed channel, classify severity with MetroLink, provide status updates, and escalate unresolved incidents to a technical lead. Final response and restoration targets are subject to contract.

OPS-02 **SERVICE REPORTING**

Monthly reporting could include availability, incident trends, application completion rates, workflow aging, and integration exceptions. Metric definitions and data sources must be agreed before baseline reporting.

QUALITY, COMMERCIAL, AND SCOPE BOUNDARIES

OPS-03 **ACCESSIBILITY**

The team can include keyboard-only navigation and assistive-technology checks in its test plan. Formal conformance evidence and any external audit are not included unless separately scoped.

COMMERCIAL AND SCOPE ASSUMPTIONS

The sample commercial model separates a one-time discovery and implementation fee from a recurring hosting and support charge. No prices are supplied in this test brief; the bidder should use TBD rather than inventing amounts. Taxes, third-party licensing, data cleansing, and optional managed integration services must be itemized in a real response.

EXPLICIT EXCLUSIONS AND DEPENDENCIES

- No replacement or redesign of MetroLink's finance platform.
- No legal, tax, or financial advice to supplier applicants.
- MetroLink supplies process owners, approved policies, a data dictionary, test users, and timely decisions.
- MetroLink and its platform providers supply API documentation, sandbox access, and required credentials.
- Historical closed supplier records and manual scanning of paper archives are not included.
- Security certifications, customer references, and fixed service-level commitments are not asserted by this fictional sample.

How to use in a proposal-response test

First summarize the MetroLink RFP and Addendum 02 in the RequirementsManagement folder. Then ask for a response using the saved requirements summary and provide this brief as the bidder's offering description. The response agent must not invent prices, certifications, case studies, or guaranteed targets.
